RPCS3 LOTR Conquest DLC Installation Guide

Prerequisites

- RPCS3 emulator
- Lord of the Rings: Conquest game already installed in RPCS3

Step 1: Install DLC Packages

1. Open RPCS3
2. Go to **File → Install packages**
3. **Important:** Due to a bug, you can only install ONE DLC at a time. Install either:
    - DLC1 package file from `DLC1_package_file` folder, OR
    - DLC2 package file from `DLC2_package_file` folder
4. **Do not install both DLC packages together** - this will prevent the DLC maps from appearing in-game.

Step 2: Install RAP File in RPCS3

1. Open RPCS3
2. Go to **File → Install packages/Raps/Edats**
3. Select the provided `.rap` file
4. Look for a success message in the RPCS3 log

Final Result

Launch your game and check Instant Action - the new DLC maps should now be available!

How the RAP File Was Created (For Reference)

The included `.rap` file was generated using the following process:

Required Hardware & Software:

- PS3 with homebrew (HEN 4.92)
- FAT32 formatted USB stick
- multiMAN file manager
- Hex editor (hexed.it)
- RIF2RAP tool

Process:

1. **Extract files from PS3:** Used multiMAN to copy `UP0006-BLUS30226_00-LOTRCONQUESTDLC2.rif` and `act.dat` from `/dev_hdd0/home/[username]/exdata/`

2. **Get PS3 IDPS:** Used HEN's built-in tool (**Network** → **Hybrid Firmware Tools** → **Dump Tools** → **Dump IDPS**) to extract the console's unique IDPS number

3. **Create IDPS file:** Converted the IDPS number to hexadecimal format using a hex editor and saved as an `idps` file

Generate RAP: Used RIF2RAP tool with the command:

rif2rap "UP0006-BLUS30226_00-LOTRCONQUESTDLC2.rif"
"UP0006-BLUS30226_00-LOTRCONQUESTDLC2.rap"

This process converts the PS3's DLC license file (.rif) into a format (.rap) that RPCS3 can use for DLC authentication.
